Unique Care UK — Release Notes

Date: 24 October 2026 **Prepared for:** Unique Care UK (Unique Resourcing Ltd) **Audience:** Everyone — no technical background needed. Plain-English explanations are given for every feature.

The Big Picture

Two pieces of software now exist for Unique Care UK:

1. **The Public Website** — a brand-new rebuild of the customer-facing website (uniquecareuk.com). This is what families, clients, and job applicants see. It is a completely separate application from anything else, with its own code and its own deployment.
2. **The Management Portal** (UniqueCare Connect) — the internal care-management application your team logs into. It was deployed as a working preview earlier, and it has **not been changed** by any of the website work.

The two are connected in one careful, one-directional way: **the website can read the portal's live job vacancies, but it can never change anything inside the portal.** Everything your team does in the portal stays exactly as it was.

Deliverable	Current version	What it is
Public website	**4cf5843**	The new customer-facing website
Management portal	**8ec1cc5**	The internal app (login: ruby@uniquecareuk.co.uk)

Part 1 — The Public Website

What was built

A complete, faithful rebuild of the existing Unique Care UK website — every page, every paragraph of copy, rebuilt on modern technology so it is faster, more secure, easier to update, and better prepared for Google.

Pages (29 in total)

- **Home** — the full landing page: hero section with the CQC rating card and company statistics (the "9+ years of care" figure calculates itself from the 2017 founding date, so it never goes stale), service highlights, "Why choose us", certifications (ISO/CQC), client testimonials, latest blog articles, areas covered, and a closing call-to-action.
- **About** — the company story, values, and approach.
- **Services** — an overview page plus **8 detailed service pages**: Domiciliary Care, Live-in Care, Supported Living, Dementia Care, Personal Care, Respite Care, Companionship, and Night Care. Each has its own full write-up and easy navigation between services.
- **Areas We Cover** — an overview plus dedicated pages for **London, Essex, and Hertfordshire**, each listing the surrounding districts served.

- **Careers** — a benefits page explaining why to work for Unique Care UK, a **live jobs board**, and an individual page for every vacancy with the full job description.
- **Blog** — three articles with reading time, social sharing buttons, related-article suggestions, and an RSS feed for subscribers.
- **Reviews** — public testimonials with a rating summary, plus a form where clients and families can **leave a review** (which you approve before it appears — see below).
- **Contact** — phone numbers, both office addresses, opening hours, WhatsApp button, and an enquiry form. When someone clicks "Enquire" on a specific service page, the form arrives **pre-filled with that service**.
- **Legal pages** — Privacy Policy, Terms & Conditions, Modern Slavery Statement, and the Carbon Reduction Plan (including the 42.865-tonne CO breakdown chart and the signed PDF), each with a clickable table of contents.
- A friendly **"page not found"** page for broken links.

Live job vacancies — the clever part

This is the feature that connects the website to your existing systems:

- When your team publishes a job in the management portal, **it appears on the website automatically within 5 minutes** — no one has to update the website separately.
- When a visitor clicks **Apply**, they are sent straight into the portal's existing application form. Applications arrive exactly where they always have. Nothing is duplicated, and the website never touches the portal's data.
- If the connection to the portal ever fails, the website doesn't break — it shows a built-in set of standard role descriptions until the connection returns, and a **"General Application"** route is always available.

Enquiries and reviews — safely stored, spam-protected

- Contact-form enquiries and review submissions are stored in the website's **own, separate database tables** (prefixed `website_` so they can never be confused with the portal's data).
- **You moderate reviews by email.** When someone leaves a review, you receive an email with **Approve** and **Reject** buttons. Nothing appears on the site until you approve it. The approval links are cryptographically signed and expire after 7 days, so they can't be forged or reused.
- **Spam protection:** a hidden trap field that catches bots, a limit of 5 submissions per 10 minutes per visitor, and IP addresses are stored only as untraceable hashes (privacy-friendly). Cloudflare Turnstile (the "I'm not a robot" check) can be switched on the moment you provide keys.
- **Email notifications** are ready to go via Resend — until a key is provided, messages are logged rather than sent, so nothing is lost or broken.

Found on Google (SEO)

- Every page carries proper titles, descriptions, and social-media preview cards (the nice image/title snippet when a link is shared on WhatsApp, Facebook, or X).
- **Structured data** (the machine-readable layer Google uses) marks up the organisation, each local office, every service, every job vacancy (eligible for Google's job-listing features), blog articles, star ratings, and breadcrumbs.
- An automatically generated **sitemap** tells Google about every page — and it only lists job pages that are actually live.

- The Google Search Console verification tag is already in place.

Accessibility (WCAG 2.2 AA)

The site is built to be usable by everyone, including people using screen readers or keyboard-only navigation: skip-to-content links, clear focus outlines, proper headings and landmarks, forms that announce their errors, and animations that switch off for users who request reduced motion. The brand blue was tested to exceed text-contrast requirements (8.43:1 against white).

Security

- The site sends strict browser security headers on every page (framing protection, content-type protection, referrer control, and a content-security policy).
- There is **no login, no admin area, and no dashboard on the website at all** — by design, so there is nothing for an attacker to target. Administration stays in the portal.
- No powerful database keys exist anywhere in the public code; the site can only read live jobs and submit forms.

Speed and freshness

Pages are pre-built for instant loading and **automatically refresh every 5 minutes** in the background (so a new job or approved review appears quickly without rebuilding the whole site). There is also a protected "refresh now" address for instant updates when needed.

The look

- Brand colours sampled directly from the company logo: a deep trustworthy blue (`#124b99`) with a lighter sky-blue accent (`#0089ca`).
- Typography: **Fraunces** for headings (warm, editorial) and **Inter** for body text (clean, highly legible) — both bundled inside the site itself for reliability.

Part 2 — Fixes Delivered Along the Way

Three updates were shipped after the initial release to make the deployment bulletproof on the hosting platform:

Version 2deb8dc — Self-hosted fonts

The site originally downloaded its fonts from Google while it was being built. Some hosting networks block that download, which made the whole build fail ("Failed to preview"). The fonts are now bundled **inside** the project, so the build needs nothing from Google. No visual change — just a build that works everywhere.

Version e78c379 — Can never crash on a network problem

If the hosting network ever loses contact with the database, some pages could previously show an "Internal Server Error". Now **every page is guaranteed to render** — it simply shows built-in fallback content until the connection returns, and forms show a polite "please try again" instead of an error page. This was verified by deliberately cutting the network and confirming every single page still loads.

Version 4cf5843 — Deployment hardening (current)

Three reliability improvements: removed a 336 MB cache folder that was bloating the deployment (now a lean 6 MB), switched to the exact server image that the portal already runs on successfully, and added strict time limits to every database call so nothing can hang. Verified working both with and without a database connection.

Part 3 — The Management Portal (UniqueCare Connect)

The existing internal application was deployed earlier as a fully working interactive preview:

- The complete application — care management, HR, job postings, applicants — running with its own fresh database.
- **Job vacancies published here are what flow through to the public website** (see Part 1).
- Demo login verified working:
  - **Email:** ruby@uniquecareuk.co.uk
  - **Password:** UniqueCare2026!
- The portal's code has **not been modified** by any of the website work, per the project rules. It remains an independent system.

Part 4 — Still To Decide (needs input from the client)

These items were flagged in the original brief as "confirm, don't guess" — nothing here blocks the site from working today:

1. **The portal's public web address.** Once provided (e.g. `portal.uniquecareuk.com`), every "Apply" button on the website will link directly into the portal's application forms. Until then, Apply buttons fall back to email.
2. **Email delivery key (Resend).** Needed for enquiry notifications, review-moderation emails, and auto-replies to actually be sent.
3. **Spam-check keys (Cloudflare Turnstile).** Optional extra protection for the forms.
4. **Brand guidelines.** The colours and fonts were sampled from the logo — supply official brand assets if they differ.
5. **Copy confirmations.** "London, Essex and Hertfordshire" in the hero; "London & Essex" in the footer; the previous developer credit has been removed as instructed.
6. **HR inbox.** Enquiry notifications currently default to careers@uniquecareuk.com.
7. **Analytics.** None installed yet — can be added later with a proper cookie-consent banner.

Version History

Version	Deliverable	What changed
9c94129	Portal	Full-stack preview deployed (initial)

Generated by Kimi

Table 2 – continued

Version	Deliverable	What changed
8ec1cc5	Portal	Preview finalised —login verified
c9e5ebe	Website	**Initial release** —all 29 pages, live jobs, forms, reviews, SEO
43c2e56	Website	Housekeeping re-save (no changes)
2deb8dc	Website	Self-hosted fonts —fixes build failures
e78c379	Website	Network-failure resilience —pages can never crash
4cf5843	Website	**Deployment hardening — current version**

How to view everything

Open the **version card** for the version you want in this conversation's preview panel:

- **Website:** the card titled "Website — deployment hardening, lean snapshot" (version `4cf5843`).
- **Portal:** the card titled "UniqueCare Connect full-stack preview" (version `8ec1cc5`), then log in with the credentials above.

Both are packaged as self-contained deployments; the first preview after a save takes a few minutes to build.
